

FitLens AI

Find the shortlist. Then make the fit visible.

An evidence-grounded creator-selection copilot that combines campaign-specific shortlisting, Creator DNA × Campaign DNA, explainable evidence, and human decision authority.

FROM QUALIFICATION → CREATIVE COMPATIBILITY

Creator selection is slow, fragmented, and hard to explain

Teams move between discovery, manual content review, fit assessment, creative ideation, and approval—often across separate tools and subjective judgments.

TODAY'S CREATOR WORKFLOW

1

Search a large creator universe

High manual discovery effort

2

Open videos one by one

Review content, tone, format and relevance

3

Compare fit in spreadsheets / notes

Different reviewers may use different criteria

4

Translate fit into a campaign idea

Creative reasoning is often separated from selection

5

Prepare internal recommendation

Evidence must be reassembled for decision-makers

Design objective: reduce repetitive review without hiding the evidence or replacing the marketer's judgment.

THE RESULT

By the time a shortlist is ready, the evidence can be scattered, the reasoning difficult to audit, and the creative opportunity still unclear.

FITLENS COMPRESSES THE DECISION WORKFLOW

Campaign context

Define what this campaign needs

Broad discovery

Surface relevant creators without over-filtering

FitLens analysis

Creator DNA × Campaign DNA across six dimensions

Evidence + creative angle

Show why the fit exists and how it could activate

Compare + human decision

Make trade-offs visible while keeping authority human

From Search to Confident Decision

We designed FitLens around the real decisions marketers make—not around AI features.

We did not design AI to choose a creator. We designed AI to make a complex creator decision faster, clearer, and more explainable.

Context before scoring

This screen converts a marketer's campaign intent into the context that every later AI judgment must use.

CreatorFit AI

FitLens AI
YouTuber Creator Shortlisting

1. Campaign Setup 2. Creator Pool 3. Creator Analysis 4. Compare Creators 5. Decision Summary Summary

Quick Campaign Setup

Tell us about your campaign

Start with the essentials. You can refine your creator search later.

- What are you promoting?**
 Provides product and category context for creator discovery.
- What is your campaign goal?**
 Helps align creator engagement velocity and sponsorship format style.

Brand Awareness
Maximize reach, brand recall, and top-of-mind visibility

Product
Introduce a new product, unboxings & haul recommendations

Consideration
Deepen trust through authentic reviews & daily recommendations

Engagement
Spark active community discussion, shares, and comments

Other
Specify a custom objective for your campaign
- Who do you want to reach?**
 Broad target audience. No complex demographic breakdowns.
- Where is your target market?**
 Prioritizes whether the creator can reach this market, where they live.
 [Change](#)

[Discover Creators →](#)

Starts broad discovery across YouTube creators. Optional refinement available on the next page.

1 Product / Category

Gives AI the commercial context for discovery and content-fit analysis.

2 Campaign Goal

Changes what “good fit” means: awareness, launch, consideration, engagement, etc.

3 Target Audience

Prevents generic creator recommendations by anchoring fit to who the campaign must reach.

4 Target Market

Used as a relevance signal—not a rigid creator-location exclusion.

WHY WE DESIGNED IT THIS WAY

Creator fit is contextual:
the same creator can fit one campaign and miss another.

Make shortlisting visible—not mysterious

The discovery screen exposes what narrowed the pool and lets marketers actively shape the comparison set.

The screenshot shows the FitLens AI Creator Pool interface. At the top, a navigation bar includes steps: 1. Campaign Setup, 2. Creator Pool (highlighted), 3. CreatorTwin Profile, 4. Compare CreatorTwins, 5. Decision Summary, and a link to 'Owala - Reusable Water Bottles - Human-in-the-Loop Decision Tool'. A 'Summary' button is also present.

The main section is titled 'Creator Pool' with the subtitle 'Explore potential creators for your campaign, or refine your requirements for a closer match.' Below this are buttons for 'Refine Results' (1), 'Adjust Fit Weights', and 'Analyze' (2) for 4 creators.

The 'Initial Discovery' section shows '10 Potential Creators' and '4 Closer Matches' (4). It lists active filters: Language: English, Min Reach: 100K+ subscribers, Min Engagement: 3%+ like-to-view ratio, active comment feedback, Activity: Active upload within past 14 days, Profanity: Family-friendly or mild only; no aggressive swearing, No Competitor: Exclusive drinkware contracts with Stanley, Hydro Flask, or Yeti, Avoid: Binge drinking, dangerous dorm stunts, excessive partying, and Audience: 18-24 (Gen Z college students).

The 'Your Comparison Pool' section (3) shows 4 selected creators: Clara Peirce, Natalie Zacek, Mai Pham, and Brett Maverick. Each creator card includes their name, bio, reach, and 'In Pool' status. A button 'Analyze Selected Creators (4)' is at the top right of this section.

1 Active Filters

Shows exactly which requirements are shaping discovery, so the shortlist is inspectable.

2 Initial → Closer Matches

Makes the narrowing process explicit instead of silently removing creators.

3 Comparison Pool

The marketer chooses which finalists deserve deeper FitLens analysis.

4 Adjust Fit Weights

Lets the campaign—not a universal algorithm—determine what matters most.

Design goal: reduce search effort without hiding the logic.

Give a reason before asking for trust

Each suggested creator is accompanied by visible signals so marketers can understand why the creator surfaced.

AI Suggested 3 Creators

Discovered from broad product, goal, audience, and market alignment without rigid exclusions.

+ Add to Comparison Pool

1 Discovery Label

Separates AI-suggested creators from creators manually added by the team.

2 Fit Tags

Summarize why the creator appears relevant before deeper analysis.

3 Dimension Preview

Provides an early fit snapshot without pretending the shortlist is the final decision.

4 Add to Comparison Pool

Keeps the marketer in control of who proceeds to deeper evaluation.

AI proposes. The marketer decides who deserves deeper analysis.

Blend AI discovery with marketer knowledge

We deliberately allow internal candidates and custom guardrails so AI does not erase existing relationships, context, or campaign constraints.

WHY

Additional Campaign Requirements
Custom screening conditions for CreatorTwin AI (demographics, tone, guardrails)

These act as additional screening conditions for CreatorTwin AI. All screening is grounded in observable creator and content characteristics.

Target Age Group
18-24 (Gen Z college students)

Geographic Market
United States

Desired Content Themes
Campus morning routines, dorm organization, vlogs

Desired Creator Characteristics
Authentic, relatable, colorful, unpretentious, relatable

Minimum Reach / Subscribers (Optional)
100K+ subscribers

Recent Activity Requirement
Active upload within past 14 days

Competitor Conflicts to Avoid
Exclusive drinkware contracts with Stanley, Hydr

Topics / Sensitive Content to Avoid
Binge drinking, dangerous dorm stunts, excess

[← Back to Campaign Brief](#) [Find Matching Creators →](#)

2 Additional Requirements
Adds audience, themes, reach, recency, competitor conflicts and sensitive-content rules.

Human context + AI consistency > AI-only discovery.

Define “fit” before scoring it

This page makes the evaluation logic explicit. Marketers choose the relative importance of six dimensions, and the total must equal 100%.

1 Adjustable Weights

Campaign priorities are set by the marketer—not hard-coded by the model.

2 Campaign DNA Preview

The spider map visualizes the target profile before any creator is judged.

3 Transparent Formula

Shows how the overall fit score is assembled from the weighted dimensions.

4 100% Balance Check

Prevents accidental over-weighting and forces explicit prioritization.

Weight = importance. Score = observed fit.

Make creative compatibility visible

This is the core product idea: compare what the campaign needs with what the creator naturally demonstrates.

1 Overall Campaign Fit

A compact summary—not the final decision. The underlying dimensions remain visible.

2 DNA Spider Map

Overlays Creator DNA and Campaign DNA so alignment and gaps are immediately visible.

3 Fit Evaluation Summary

Explains why the creator fits and surfaces the strongest alignment plus review flags.

4 Dimension Breakdown

Lets marketers inspect the individual scores instead of relying on one headline number.

Question answered: "How does this creator fit THIS campaign?"

Turn fit analysis into a usable activation idea

Once FitLens understands the fit, it translates that insight into a campaign angle—without pretending the idea is automatically approved.

SUGGESTED CREATIVE ANGLE FOR PARTNERSHIP

"reusable water bottle in the "Campus Reset & Daily Hydration" Routine"

Feature the Owala reusable water bottle as an essential staple during morning class prep, study sessions, and gym resets.

SUGGESTED 15S HOOK:

"Creator showcases 3 non-negotiables packed in their daily backpack, before an 8 AM lecture, emphasizing leakproof hydration."

CALL-TO-ACTION (CTA):

Exclusive back-to-campus discount code and colorway link highlighted in video description and pinned comment.

Audience Response (Comment-Based Audience Signals)

Note: Signals extracted from recent public comments. Does not represent the creator's total audience.

Positive Themes

- High enthusiasm for routine motivation and practical recommendations
- Aesthetic appreciation for creator's style and presentation
- Strong parasocial trust and positive viewer sentiment

Mixed / Neutral Themes

- Questions regarding product links, pricing, and availability
- Occasional comments on video length or editing styles

Audience Concerns

- Sparse critique regarding routine realism during busy exam schedules

Product Interest Signals

- Requests for water bottle and other links
- Excitement when creator shares coupon codes or new color releases

1

Suggested Creative Angle

Uses the creator's natural format and campaign goal to propose a plausible partnership concept.

2

Suggested Hook

Shows how the product could enter the creator's existing storytelling style.

3

Call-to-Action

Connects creative fit to a concrete campaign action rather than stopping at analysis.

4

Audience Response Signals

Uses recent public comment themes as supporting signals—not as a claim about the creator's entire audience.

Every judgment should be traceable

A fit score becomes more useful when a reviewer can inspect the content evidence behind each dimension.

FitLens AI
Youtuber Creator Shortlisting

1. Campaign Setup 2. Creator Pool 3. CreatorTwin Profile 4. Compare CreatorTwins 5. Decision Summary

Owala - Reusable Water Bottles
Human-in-the-Loop Decision Tool

Supporting Evidence & Video Citations

Direct citations linking CreatorTwin conclusions to verified recent public YouTube uploads:

- Audience Alignment** (Score: 97 / 100)
Demonstrates high alignment with Gen Z college students and young professionals, driven by active lifestyle followers and young adult community engagement.
 - "College Apartment Reset & Realistic Sunday Routine for the Week Ahead" (Open Video)
- Concept Relevance** (Score: 96 / 100)
Connects directly to the campaign concept and current cultural moment ("Aesthetic emotional support water bottles, matching pastel campus fits, TikTok hydration hacks, dorm room reset Sundays,").
 - "PACK MY TOTE BAG WITH ME: Daily Essentials, Gym Gear & Hydration" (Open Video)
- Brand Compatibility** (Score: 96 / 100)
High brand compatibility with no competitor exclusivity violations or profanity risks identified.
 - "College Apartment Reset & Realistic Sunday Routine for the Week Ahead" (Open Video)
- Topic Relevance** (Score: 96 / 100)
Recent uploads frequently showcase lifestyle, wellness, hydration habits, and college preparation, matching "college lifestyle, dorm organization, morning routines, campus vlog, gym & wellness, hydration, what is in my backpack".
 - "College Apartment Reset & Realistic Sunday Routine for the Week Ahead" (Open Video)
- Content Style Fit** (Score: 94 / 100)
Video pacing, aesthetic visuals, and candid vlog format create a seamless environment for subtle brand integration.
 - "PACK MY TOTE BAG WITH ME: Daily Essentials, Gym Gear & Hydration" (Open Video)

1 Dimension Score

Keeps the score tied to a specific criterion rather than presenting an unexplained overall number.

2 Evidence Statement

Explains what observed content signal supports the assessment.

3 Video Citation

Lets the marketer open the referenced public content and verify the evidence directly.

4 Timestamp / Specific Example

Reduces review time by pointing the reviewer toward the relevant evidence location.

Explainability = score + reason + inspectable evidence.

Keep information the model cannot know

Creator selection also depends on negotiation, relationship history, exclusivity, approvals and team judgment. We preserve a place for that context.

The screenshot shows a dark-themed interface titled "MARKETER'S DECISION NOTES & PARTNERSHIP STATUS" with a "Human Decision Layer" label in the top right. Below the title is a text area for notes, followed by a text input field containing sample text. At the bottom, there is a checkbox labeled "Mark as approved shortlist candidate for campaign contracting" and a "Save Marketer Notes" button. Three numbered callouts are present: 1 (purple) points to the text input field, 2 (blue) points to the checkbox, and 3 (green) points to the "Save Marketer Notes" button.

1 Marketer Notes

Captures qualitative information that should not be inferred by the AI.

2 Approval Checkbox

Makes human sign-off explicit rather than allowing AI to silently convert analysis into approval.

3 Save Decision Context

Keeps the reasoning attached to the creator for later comparison and contracting.

The model can inform the decision.
It cannot own the partnership.

Compare trade-offs without collapsing creators into one number

We use separate FitLens cards first, then a common matrix, so marketers can see both the shape of each fit and the direct attribute comparison.

1 Separate Spider Maps

Avoids an unreadable multi-creator overlay while preserving the same evaluation framework.

2 Strongest Alignment

Surfaces what each creator does especially well for this campaign.

3 Watch Item / Gap

Prevents a high fit score from hiding important execution or brand risks.

4 Human Selection Authority

Explicitly reminds users that trade-offs support—not replace—the team's final selection.

Make the comparison auditable

The matrix gives the team one consistent view of dimensions, overall fit, brand safety, strengths and proposed concepts.

Side-by-Side Scoring Matrix

1

Same Dimensions

Every finalist is judged using the same campaign-specific criteria and weights.

2

Overall Fit Score

Useful for orientation, but deliberately surrounded by the underlying components.

3

Brand Safety Status

Separates a key guardrail from general fit so it remains visible during comparison.

4

Strength + Creative Concept

Connects quantitative comparison back to the actual partnership opportunity.

The goal is not ranking for ranking's sake—it is better trade-off visibility.

End with a decision package, not an AI verdict

The final page synthesizes the strongest candidates, their strengths and watch items, then hands authority back to the marketer.

FitLens AI

HUMAN MARKETER DECISION AUTHORITY
CreatorTwin AI is a decision-support copilot. It does NOT automatically approve, contact, or book creators. Every partnership offer, budget allocation, and contract signature is strictly made by your human marketing team.

TOP RECOMMENDED CANDIDATES
Ranked by multi-dimensional Campaign Fit Score

#1 Contender	#2 Contender	#3 Contender
Natalie Zacek 84.3 / 100 Fit Score Outstanding audience alignment and playful college tone with strong backpack concept relevance, but rapid jump-cut vlogging requires dedicated feature focus. KEY STRENGTH Audience Alignment & Tone — Direct connection to Gen Z college students with an energetic, colorful tone that matches the brand voice. WATCH ITEM Content Style Fit — Rapid jump-cut vlogging risks passing over key product features (e.g., FreeSip spout) without structured pause. Selected for Campaign Inspect Full CreatorTwin Profile --	Clara Peirce 83.2 / 100 Fit Score Demonstrates exceptional brand safety and aesthetic style fit for Owala, integrating naturally into calming Sunday prep and daily routines with moderate viral trend relevance. KEY STRENGTH Content Style Fit & Brand Safety — Pristine, aesthetic routine framing where the bottle integrates naturally as an everyday lifestyle staple. WATCH ITEM Concept Relevance — Gentle, subdued pacing does not naturally support high-energy viral campus trends or loud social challenges. Select as Primary Creator Inspect Full CreatorTwin Profile --	Mai Pham 80.7 / 100 Fit Score Delivers immense viral reach and passionate hydration habit alignment, but chaotic unfiltered energy and language require active brand safety guardrails. KEY STRENGTH Content Style Fit & Concept — Powerful viral narrative around extreme hydration challenges, emotional support water bottles, and lifestyle resets. WATCH ITEM Brand Compatibility & Tone — Chaotic, unfiltered humor and occasional mild profanity require brand safety guidelines and human review. Select as Primary Creator Inspect Full CreatorTwin Profile --

1 Human Authority Banner

Sets the governance rule before the recommendation is read: AI does not approve, contact, book or contract creators.

2 Candidate Summary

Condenses fit into a readable explanation for decision-makers who did not inspect every screen.

3 Strength + Watch Item

Keeps upside and risk visible together, reducing one-sided recommendation bias.

4 Select as Primary Creator

The final action is explicitly human-triggered.

Campaign context + public creator evidence → Gemini reasoning → human decision

FitLens uses AI for content understanding and structured reasoning, while keeping source evidence and human controls visible.

INPUTS

Campaign Brief

Product/category, goal, target audience, target market

Optional Requirements

Reach, recency, themes, competitor conflicts, guardrails

Creator Evidence

Recent public YouTube content, metadata, observable content patterns

Public Comment Signals

Supporting themes only—not a claim about the entire audience

Human Context

Team-added creators, weights, notes and final approval

GOOGLE AI / GEMINI

Reasoning layer inside the prototype

1

Content understanding

Identify topics, format, tone and observable creator patterns

2

Evidence extraction

Connect dimension judgments to specific content signals

3

Creator × campaign reasoning

Assess the same six FitLens dimensions against Campaign DNA

4

Creative translation

Turn fit patterns into a plausible activation angle, hook and CTA

5

Structured summaries

Generate concise strengths, gaps and comparison-ready explanations

OUTPUTS

Creator Pool

Broad discovery + optional refinement

FitLens Analysis

Creator DNA × Campaign DNA

Evidence

Score + reason + inspectable source

Comparison

Different strengths and gaps across finalists

Decision Support

Human notes, review flags and final selection

Evidence boundary: FitLens should not invent unavailable audience demographics. When direct audience data is unavailable, it should use observable content/community signals and label uncertainty.

How we would test whether FitLens actually improves the workflow

The prototype should be evaluated on speed, evidence quality, decision clarity, and responsible limitations—not on invented campaign-success claims.

WHAT WE WOULD MEASURE

EFFICIENCY

Time to qualified shortlist

Minutes from campaign brief to a reviewable finalist set

EFFICIENCY

Time to review one creator

How much manual content-review time is reduced

QUALITY

Evidence traceability

% of AI claims linked to inspectable creator evidence

QUALITY

Human reviewer agreement

Whether reviewers find the AI reasoning supported by the cited evidence

USABILITY

Decision clarity

Whether marketers can explain why one creator fits differently from another

Simple test: give marketers the same campaign + creator set with and without FitLens, then compare time, evidence quality, and decision confidence.

KNOWN LIMITATIONS / GUARDRAILS

Audience data can be incomplete

Do not infer precise demographics when the platform does not provide them.

Public comments are noisy

Use comment themes as supporting signals, not as the creator's total audience.

Fit is not campaign success

Scores describe creator-campaign alignment; they do not predict views, sales, conversions or ROI.

Evidence can become stale

Recent-content weighting and timestamps matter because creator content changes.

Commercial context remains human

Fees, negotiation, relationship history, exclusivity and approvals require marketer input.

Success criterion: faster review + more inspectable reasoning + clearer trade-offs, while the final partnership decision remains human.

Scale discovery as campaign needs grow

The same FitLens decision framework can support both individual marketers and larger agency workflows.

FITLENS STARTER

Explore the core workflow

For individual marketers and smaller campaigns

- ✓ Limited creator discovery per campaign
- ✓ Compare up to 8 creators
- ✓ Creator DNA × Campaign DNA
- ✓ Evidence-backed fit analysis
- ✓ Core side-by-side comparison

✦ FITLENS PRO

FOR SCALE

Expand creator discovery

For brands, agencies, and teams managing larger creator programs

- ✓ Larger creator discovery pool
- ✓ Analyze more creators per campaign
- ✓ More saved campaigns and projects
- ✓ Deeper comparison and evidence capacity
- ✓ Built for larger team workflows

Every screen answers a decision question.

01

WHO SHOULD WE LOOK AT?

Campaign context, filters, AI suggestions and team input reduce the search space.

02

WHY DOES THIS CREATOR FIT?

Campaign DNA, Creator DNA, spider maps, evidence and creative translation explain compatibility.

03

WHO SHOULD WE MOVE FORWARD WITH?

Comparison, human notes and decision support make trade-offs clear while keeping authority human.

AI reduces repetitive research. Evidence makes the reasoning inspectable. Humans retain the partnership decision.

See the fit before you build the partnership.
